
11/11/20 . LAST GUITAR . lanakiramilucas20fullversiontpb A: You can use strpos and check the size of the resulting value of strlen(substr(\$html,\$offset,\$length)) to check if it's the correct length. That being said, you can iterate through every single letter in the file and use strpos to see if it's found. $-5 * w + 3 = -7$, $-2 * s + 18 = -4 * w$. Suppose $-s * y + 4 * y = 4$. What is the units digit of y? 4 Suppose $-3 * v = -4 * h + 166$, $-5 * h + 171 = 3 * v - 2 * v$. What is the tens digit of h? 4 Suppose $-4 * q - 2d92ce491b$
