Click 'Show' to view software contact informationQ: SQL Server: Copy a list to a temp table to be used in a job step, then drop it We have a SQL Server Agent job that runs every night to process some data. We'd like to make this process faster. We have a job step that is reading from a table and inserting the rows into another table, then we have a job step that drops the temp table. When we run the job step that copies the rows, we get an error because the temp table is still being used. How can we do this so that the job step to copy the rows runs and then the job step to drop the table runs? A: You can't drop a table while it's in use. You can use a DDL trigger to simulate the DROP TABLE. American Airlines has apologised to passengers after cancelling flights from Sydney to Hong Kong on Sunday due to a technical glitch. The Boeing 767 carrying 82 passengers and a crew of three was supposed to take off from the international airport at Sydney at 2.50pm. However, shortly after take-off, the plane turned back towards the airport and made an unscheduled landing, with a maintenance crew on board. The airline said in a statement that the plane was "unable to be certified for takeoff by ground operations after completing the final ground run." " Airline operations resumed after an alternative aircraft was located and the maintenance team was able to complete the procedures," the statement read. The airline said the passengers would receive compensation and confirmed it was working with regulators and the
